Floodplains by Design

· REDUCING RISK, RESTORING RIVERS ·

Investments Since 2013 Will Result In:

~$2.5 billion saved in disaster response & recovey costs

11,575 jobs created

218 miles of river restored

42 recreation areas improved or established

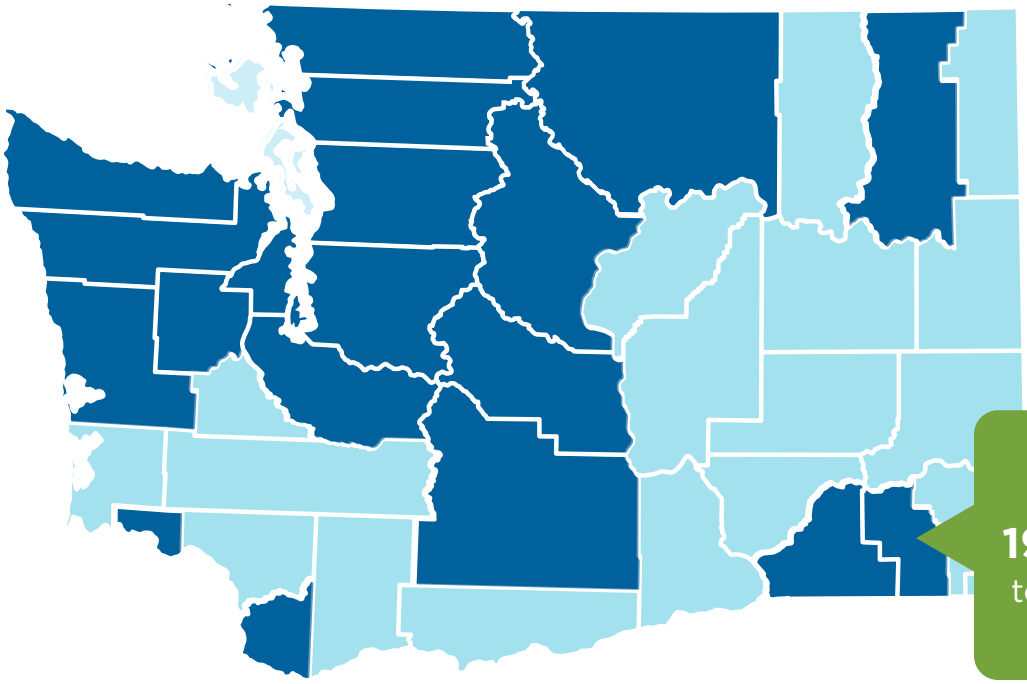

16,499 acres of floodplain reconnected

91 communities with reduced risk

9,823 structures or homes removed or with reduced flood risk

27,344 acres of improved working lands

11,162 acres of land preserved

Floodplains by Design is an ambitious public-private partnership working to reduce flood risk and restore habitat along Washington's rivers and streams.

By transforming how floodplains are managed on a landscape scale, we can support thriving communities and a healthy environment. Since 2013, the Washington State Legislature has appropriated $449.2 million to support large-scale, multiple-benefit projects across the state through the Department of Ecology's Floodplains by Design grant program.

ACCOMPLISHMENTS TO DATE INCLUDE ALL IN-PROGRESS, COMPLETED AND PLANNED PROJECTS FUNDED AS OF THE 2027- 2029 BIENNIUM.
